

Kevin Kusky | Software Engineer

(516) 506 - 1257 | kevinkusky@gmail.com | [GitHub](#) | [Portfolio](#) | [LinkedIn](#) | Suffolk County, NY

Skills

JavaScript, Ruby, Python, HTML 5, CSS 3, SQL, React, Ruby on Rails, Bootstrap 5, Redux, Git, RSpec, Node, jQuery, AWS, PostgreSQL, Regex, cron, SQLite3, Webpack (*Learning*: Flask, JinjaPycopg, SQLAlchemy, Alembic)

Experience

Kalkomey Enterprises LLC Richardson, TX (Remote)

Software Developer I

March 2021 - Present

- Integrate APIs based on documentation to validate student details and communicate when a student has completed their course with the applicable state agency adhering to the specified constraints
- Develop tour feature by targeted iteration of relevant elements, highlighting and providing details of how to navigate the dashboard by utilizing a slice of react state and props to mitigate customer support calls regarding the new course flow students were directed through
- Complete daily work including bug fixes for prod support ranging from frontend and backend as well as customer facing products and internal tools, reviewing PRs, participating in agile team meetings, and structuring data transfer reports to relevant state agencies

Strategies for Wealth New York, NY

Agency Control Officer

June 2018 - March 2020

- Supervised 100 registered representatives, annually receiving the top Park Avenue Securities (PAS) exam rating for supervisory program and controls implemented while continually achieving the highest completion metrics for all Guardian and PAS compliance initiatives

Maxim Group LLC New York, NY

Prime Brokerage Principal

July 2017 - June 2018

- Strengthened department client relationships by providing all department communications and daily reporting, and authenticating, expediting, and effecting financial transactions
- Supervised customer trades, ensuring clearing of away trades by resolving away-side discrepancies in both International and American markets and currencies and appropriately making trade corrections to department error account

Compliance Associate

May 2014 - July 2017

- Product management for internally distributed Firm-Element continuing education product, coordinating and pair programming with in-house software developer

Projects

DailyPrana

2020 - [Live Site](#) | [Github](#)

Vanilla JavaScript Pranayama tool that assists in the practice of specific breathing techniques with CSS rendered visual cues

- Utilized JavaScript document queries to manipulate DOM and alter form fields in real-time, specific to user interaction
- Constructed CSS keyframe animations in JavaScript which render breathing environments informed by form data, first testing user input to validate data and then appending the keyframe to the document head as a stylesheet on the form submit event
- Added keydown event listener which toggles the play-state of the breathing animation and visibility of a modal menu or allows a user to navigate back to the initial form based on specified keycodes - the space bar and 'R' keys

YubeToo

2020 - [Live Site](#) | [Github](#)

Full Stack YouTube clone with user, video, comment, and like features written with Rails, React, Redux, PostgreSQL, and AWS

- Constructed authentication system based on model-level and session-based validations on the backend while leveraging the React-Router library with a dedicated slice of redux state on the frontend which allows users to login, logout, sign up, and limits user control over entities associated with a user's id
- Enforced database validations with Rails polymorphic association pattern, ensuring DRY implementation of commenting and liking features (i.e comments on videos and comments on comments)
- Employed an a/b testing algorithm for video index to sort videos based on specific criteria such as a video's view count

GetSet, *Front End Lead*

2020 - [Live Site](#) | [Github](#)

Team built game relying on a picture-comparison API built employing a MERN Stack (MongoDB, Express, React, Node)

- Employed Axios library to make HTTP requests to and return data from the backend to thunk actions responsible for triggering redux state updates and, in turn, re-render components with up-to-date data
- Site design built collaboratively by relying on careful HTML class naming conventions in tandem with ternary logic for component rendering, allowing for state-based SCSS styling and a dynamic, responsive UI

Education

Software Engineering, App Academy New York, NY

July 2020

Bachelor of Science, Mathematics, Adelphi University, Garden City, NY

May 2012
